

Mode Removal Sweep — KL(action) vs KL(noise) Non-Linearity Analysis

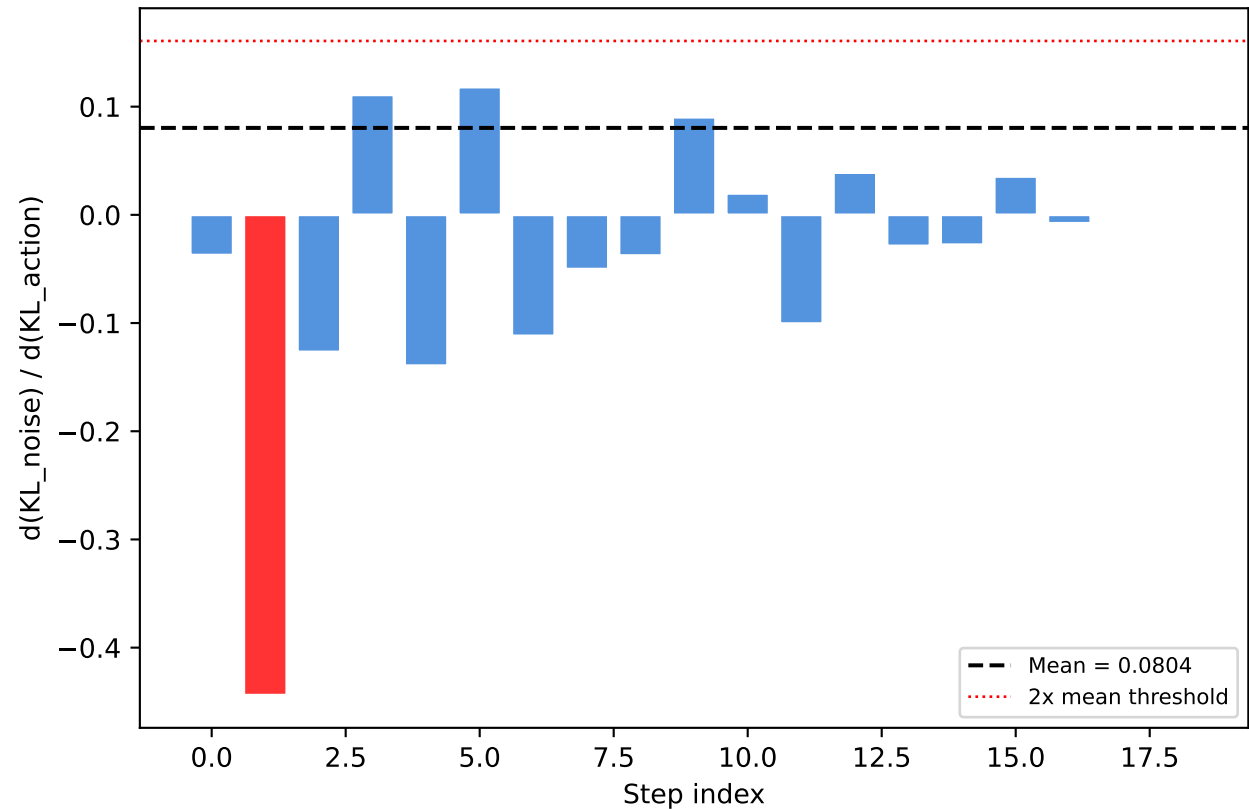

(A) Divergences vs mode removal fraction

(B) KL(action) vs KL(noise)
 $T^* = 0.7696$ R^2 improvement = 0.687

(C) Local slope — spike = non-linearity onset
Max/mean ratio = 5.52

(D) Non-linearity summary

NON-LINEARITY THRESHOLD	
T^* (breakpoint)	0.7696
Flat level c_0	0.06003
Slope before T^*	0 (flat by construction)
Slope after T^*	-0.00141
R^2 improvement	0.6873
CORRELATION METRICS	
Pearson r	-0.4036 ($p=7.76e-02$)
Spearman r	-0.6917 ($p=7.28e-04$)
SLOPE ANALYSIS	
Mean local slope	0.08036
Max local slope	0.44389
Slope ratio (max/mean)	5.52
INTERPRETATION	
Clear non-linearity above T^*
